DAY 3 | WEDNESDAY 4 NOVEMBER

Put it together, then prove it

Morning one: how the pieces fit and what to do on Monday. Then each team answers the director's question.

Part 1

Putting it together (60 min)

Lab 7

Capstone: a verified one-page brief

Demos

7 teams, 3 minutes each

All data and documents are fictional.

DAY 2 IN FOUR LINES

What you built yesterday

Measured RAG

Golden set, section chunks, status filter, hybrid search, citation check.

An agent

Model, SQL tool, document tool and a loop. Five beats on the Friday problem.

A test habit

Known answers, thinking-level comparison, five attacks.

Cost sense

Tokens, prices and a monthly estimate for 25 users.

Quiz now: five questions, five minutes.

TODAY'S PLAN

A short day, one lab

08:30	**Recap and quiz** 15 minutes.
08:45	**Putting it together** 60 minutes. The four layers, end to end, skills, Copilot or Gemini, governance, Monday morning.
09:45	**Teams and scenario cards** 10 minutes. Seven teams choose seven questions.
09:55	**LAB 7: Capstone** 80 minutes with a break at 10:30. Investigate, verify, write the brief.
11:30	**Team demos and scoring** 40 minutes. 3 minutes plus questions each.
12:10	**Results, Monday morning, close** 35 minutes. Finish at 12:45.

PART 1

Putting it together

One picture of everything you built, and what it means at work.

Four layers, and what you did in each

1. Prompt

Five parts, standing rules, examples. Day 1: Copilot and Gemini.

2. Context

Documents, schema, retrieval, filters. Days 1 and 2: RAG.

3. Harness

Read-only tools, row caps, logs, status filter, citation check. Day 2.

4. Loop

Tests, golden sets, attacks, re-testing after each change. Days 2 and 3.

Prompt, Context, Harness, Loop: fix problems at the right layer.

END TO END

What happens when a manager asks

Question

Plain English, from a manager.

Rules and map

System prompt, schema, join hints.

Tool calls

SQL for facts. Documents for rules.

Checks

Read-only, row cap, status filter, logs.

Answer

Numbers, clauses, assumptions, next step.

Facts from SQL. Rules from documents. Checks around both.

LIVE DEMO

Beat five, live, in four steps

Step 1

Ask the question

Which clauses are we breaching on Friday evenings at Terminal 1, and what must we do next?

Step 2

Read the tool log first

Which SQL ran? Which sections came back? Were they all approved?

Step 3

Verify one number

Run the SQL yourself. Does the average wait match?

Step 4

Mark the answer

Use the green and red lists from yesterday.

What the model really does

It does not run code

It returns a request: call this tool with these arguments.

Your code runs the tool

Your function executes it, safely, under your rules.

The result goes back

Text, or an error message, returned to the model.

The loop continues

The model decides: another tool, or the final answer.

The model asks. Your code decides.

Skills: reusable instruction packs

What it is

A saved set of instructions, rules and examples for one kind of task.

Example

An airport brief skill: headline, three numbers, clauses, three actions, limits.

Where it helps

Every analyst produces the same format, with the same checks.

How to start

Take a prompt that worked three times. Save it with its rules and one example.

A prompt that works three times becomes a skill.

WHICH TOOL WHEN

Copilot notebook or Gemini agent?

QUESTION	COPILOT NOTEBOOK	GEMINI AGENT IN COLAB
Where does it live?	Inside Microsoft 365, with your files	A notebook and a Google project
Best for	Explaining documents, drafting, Excel tables	Combining database facts with documents
Needs code?	No	A little: tools and loop are code
Control	Notebook instructions, your sources	Full: tools, rules, logs, tests
Audit trail	Limited to what the app shows	Every tool call logged
Use it when	Individuals explore and write	A team needs a repeatable, tested service

Explore in Copilot. Build the service with an agent.

GOVERNANCE

GIA-POL-10: the rules that apply to you

2.2 and 2.3 Data

Internal data only with approved services under paid terms. Personal data never goes to an external model.

2.4 Training

Pilots and training use fictional data only. Real data needs the paid project route.

3.1 to 3.4 Agents

Read-only access, every tool call logged, rules from approved documents, numbers from queries.

4.1 and 4.2 People

A named person is accountable. Answers are checked against the source query before publication.

What you built already follows the policy.

MONDAY MORNING

Five actions for your own department

1

Pick one repeated question

Something managers ask every month, with a clear data source and a clear rulebook.

2

List the data and the documents

Which tables, which approved documents, who owns them.

3

Check the rules first

Data class, approved service, paid terms. Use fictional or approved data only.

4

Build a golden set of 10 questions

Known answers, before you build anything.

5

Pilot with five users

Log everything, check the numbers, then decide.

Small, measured, governed. Then grow.

CAPSTONE

The director's seven questions

Choose one. Your team has about 80 minutes.

SCENARIOS

Seven scenario cards

#	SCENARIO	THE DIRECTOR ASKS
1	Friday evenings	Full case: waits, counters, missed flights, cost, rules broken, fix
2	Late airline	Which airline gets a warning? What happened to its rebates?
3	Where to add a flight	Which route, which incentive, what revenue upside?
4	Two problems in Terminal 2	Wi-Fi and queues are both low. Which first, and why?
5	Did the smart gates work?	Compare before and after 1 July 2026. Expand?
6	Shops under review	Which outlets under-perform? What is the effect of queues on spend?
7	Complaints and the rulebook	Targets met? Which categories are systemic? What must we report?

One team, one scenario. Two minutes to choose.

A one-page brief the director can act on

The page contains

One-sentence headline: the finding and why it matters

Key numbers, each verified by your own SQL

Rules: document, clause, requirement, what we observed

Three actions, each with an owner and a deadline

Assumptions and limits

The rules of the game

Use the agent to investigate

Verify at least three numbers yourself with wh.sql

Only approved documents count as rules

Anything you cannot reproduce stays out of the brief

Optional: ask the agent to review your brief

A number you cannot reproduce does not go in the brief.

LAB 7 | 80 MINUTES

Capstone: the director's question

Where: Google Colab, notebook 07 Goal: Investigate your scenario and produce a verified one-page brief.

1. **Choose your scenario**
   Set MY_SCENARIO to your team number. Run the three starter questions.
2. **Follow the evidence**
   Ask your own follow-ups: why, by month, by terminal, what do the rules say?
3. **Verify three numbers**
   Find the SQL in the tool log. Run it yourself with wh.sql.
4. **Write the brief**
   Fill in the template: headline, numbers, rules, actions, limits.
5. **Review and rehearse**
   Ask the agent to review the brief. Rehearse the 3-minute demo once.

Done when: your brief is downloaded, three numbers are verified, and one person is ready to present.

TIME CHECK

Where your team should be

10:30

Break

Starter questions done, scenario understood

11:00

Three numbers verified

With your own SQL

11:15

Brief written

All five sections filled

11:30

Demo starts

Rehearsed once

Verification first, writing second.

THE DEMO

Three minutes per team

30 s: the finding

One sentence. What and why it matters.

60 s: the evidence

Two numbers and one rule, with the clause.

30 s: how we checked

The SQL you ran yourself.

45 s: the ask

Three actions with owners.

15 s: one limit

What we are not sure about.

Show the check, not just the answer.

SCORING

How the demos are scored

CRITERION	POINTS
Finding is correct and clearly stated	25
Numbers verified by the team with their own SQL	25
Rules cited with document and clause, approved version	20
Recommendations specific, with owner and deadline	20
Assumptions and limits stated honestly	10

Half the points reward checking.

DEMOS

Team demos

Seven teams. Three minutes plus one minute of questions each.

WHAT YOU LEAVE WITH

Three days, one skill

Day 1: Ask and explore

Copilot notebooks, prompting, RAG, SQL.

Day 2: Build and test

Agent, tools, harness, measurements, attacks.

Day 3: Prove it

Verified brief, governance, Monday actions.

The habit

Read the log.
Verify the number.
Cite the clause.
State the limit.

Thank you. Feedback form, please.
